

Huston: Connected Life, Pension & Wealth Insurance

Huston is our insurance management platform, built to bring customers, policies, claims, and operations together in one connected environment. It is modular and end to end, supporting Life, Pension, and Wealth insurance. It connects products, policies, customers, claims, distribution, and operations within a single environment. From product creation and customer onboarding, through policy servicing and claims, Huston gives insurers and intermediaries the control, visibility, and flexibility to manage the complete insurance lifecycle, simply and consistently. The modular build enables Huston to connect straight into Odycy, our wealth management platform supporting investment strategies.

Our Vision

Empower financial services organisations with a comprehensive and modular wealth and insurance orchestration platform, delivered as cloud agnostic SaaS services.

Our Mission

To bridge the gap between traditional insurance and wealth management systems and modern digital ecosystems, enabling efficiency, personalisation, and trust at scale.

Mission control for modern insurance

Just as Houston was mission control for the journey to the Moon, Huston is the control center for your insurance business, guiding every process with precision and clarity.

Huston Functions

- Comprehensive insurance platform: end-to-end policy administration for life, pension and Wealth insurance
- Configurability: supports both pure risk and investment-linked products with flexible configuration
- End-to-end customer journey: manages onboarding, pricing, policy management, and claims
- Customer 360° view: a built-in mini-CRM module offering a unified customer view
- Integrated financial reporting: billing, collection, and accounting modules feed GL and statutory reports
- Automated recurring operations: invoicing, premium charges, reminders, and reports run through batch functions
- User access control: flexible management of user roles and permissions
- Smart claims management: configurable automation supporting surrender, partial surrenders and dithered payments

What Differentiates Huston as a PAS?

- **Speed to market:** rapid product setup through powerful configurability
- **Efficiency through reusability:** reusable components minimise duplication
- **Flexible product structures:** adapts to a variety of simple to complex product structures
- **Low-code scalability:** enables quick, scalable implementations
- **Continuous usability enhancement:** an ongoing focus on improving user experience
- **Event-driven approach:** every function in Huston is event-driven, with defined details, states, and rules
- **Modular & scalable distribution:** channels, sales, commissions, markets, and APIs, all connected
